

## Store-a-film

For my project, I want to create a website where you can keep track of the movies and shows you watch, while also giving suggestions based on your interests. The website will also show where you can watch or stream the movie. I've decided on this because I hate when people ask for my favorite movie or show, and I can't even remember what I've watched, so with this free website, I want users to be able to easily find what they've watched. I also want the website to have a feature where you can friend people and see what they're watching or what they recommend, so basically a Spotify for movies and shows.

1. Search page
2. A movie/show detail page
3. A home page
4. A recommend/friends page
5. About us/how to page

With this site, you will be able to store movie/show names, collaborate with fellow users to discover new films that may interest you, and find places to stream movies. You'll be able to log in, but you don't have to use the app. You can log in if you want to create playlists and interact with others. It would be a free to use website.
